- etc
STACK

EDUCATION

University of Nigeria
English and Literary studies

TOOLS STACK

Web development
HTML, CSS, JavaScript, Node, Python -Django
Mobile Application development
React Native, Node
Enterprise Software development(Odoo ERP)
JavaScript, Python, XML
Database Management
MongoDB, PostgreSQL

PROJECTS

Developer Cycles Training with Andela Capstone Project
This project was a backend Application done as a completion task of DevC Training, it was named "Teamwork", an internal social networking System for a company.
<https://teamwork-backend-api.herokuapp.com/api/v1>
Tech - Nodejs, Express, and Postgresql as its database.

Odoo Mobile

I built a mobile app which communicates with the Odoo ERP system, this makes it easier for members of teams using Odoo to easily view and navigate their tasks. It also incorporates a messaging system which communicates with the Odoo discuss App.

Automation Scripts for Odoo Tasks

I've written a lot of scripts in Python to help businesses automate some of their tasks. Some of the scripts' functions include uploading data from a manual source such as Excel sheets to an Odoo ERP database.

SpecNota

A web based project management and collaboration tool. Built with Django for the backend
www.specnota.io

I inherited the Django codebase, made some modifications and started reimplementing the entire App with Nodejs

Digital CV Maker

A web Application that makes it easy for one to create and have a PDF copy of their CV. It allows you to create an account, set up your profile, select a CV template of your choice, then download as PDF.

<https://github.com/francosion042/cv-maker>

Tech - Django, Postgresql

Portfolio website for Dr. Chika

I built a dynamic personal website for Dr. Chika, a lecturer in the Department of Computer science, University of Nigeria, Nsukka.

Tech - Django

Odoo system Customizations

I've worked on many projects which either extends the already existing Odoo features or adds new functionalities.

DEVC-BuildforSDG-Assessment-COVID19-Estimator

This was an eligibility assessment for the 2020 [#BuildforSDG](#) program

The assessment empowered me to **attempt** helping society and leaders prepare for the **real big problem** of COVID-19, which is **its impact on lives, health systems, supply chains, and the economy**:

It was a backend task, done with Nodejs and express

<https://github.com/francosion042/DEVC-BuildforSDG-Assessment-COVID19-Estimator>

Swapstall

A currency swapping application

Built with Nodejs/Adonis
